

Klimata izmaiņas un Rīgas jūras līča modeļaprēķini mūsu gadsimtam (Ce2Coast projekta rezultāti)

Saturs

1. **Ce2Coast projekts**
2. **Rīgas līča reanalīze un nākotnes projekciju modeļaprēķini**
3. **Modeļaprēķinu rezultāti**
4. **KO ar to darīt?**
5. citi jaunumi – HywasPort attīstība

1. Ce2Coast

2020/23 JPI Climate & JPI Ocean projekts «Ce2Coast: Downscaling Climate and Ocean Change to Services: Thresholds and Opportunities»

WP1: DATA

WP2: Earth System Models (CMIP6)

WP3: Hindcast (Feb 2022) and Projections (Feb 2023)

LU: RJL klimatiskie aprēķini pagātnei un nākotnei

WP4: Pressures on services

WP5: Science and society

1. Ce2Coast

Ja par klimatu viss «sen skaidrs», tad par JŪRAS klimata projekcijām nav labu skaitlisku datu

Piemērs – 2009.gada klimata projekcijas gs beigām Dobelē

2. Reanalysis for GoR

Time period: 1993-2021 (29 yrs)

Domain: Gulf of Riga (Lon 22°-24.6°E, Lat 56.96° - 58.64°N)

Software: HD Hiromb-BOOS model, UL setup
Waves SWAN, UL setup

Resolution: 1x1 km (187x203 nodes), 20 layers, 10 minutes

Parameters: velocity, waterlevel, T, S, ice, waves

Bathymetry: Emodnet (2018)

BC: HD CMEMS climatic (SMHI NEMO)

Waves FMI reanalysis

River runoff: E-HYPE (SMHI) reanalysis

Atmosphere forcing: ERA5 hourly reanalysis

Tides: astronomic calculations

Output: daily in all nodes, hourly in surface nodes

Performance: 1 year/day

Production: 1st iteration Jul/Aug-21

Final iteration Jan/Feb-22

2. Projection for GoR

Time period: 2021-2100 (80 yrs)

Domain: Gulf of Riga (Lon 22°-24.6°E, Lat 56.96° - 58.64°N)

Software: HD Hiromb-BOOS model, UL setup

Waves SWAN, UL setup

Resolution: 1x1 km (187x203 nodes), 20 layers, 10 minutes

Parameters: velocity, waterlevel, T, S, ice, waves

Bathymetry: Emodnet (2018)

BC: Bias corrected downscaled NorESM2-MM_ssp585_r1i1p1f1

Waves LU fetch setup

River runoff: E-Hype climatological model

Atmosphere forcing: Bias corrected corrected

downscaledNorESM2-MM_ssp585_r1i1p1f1

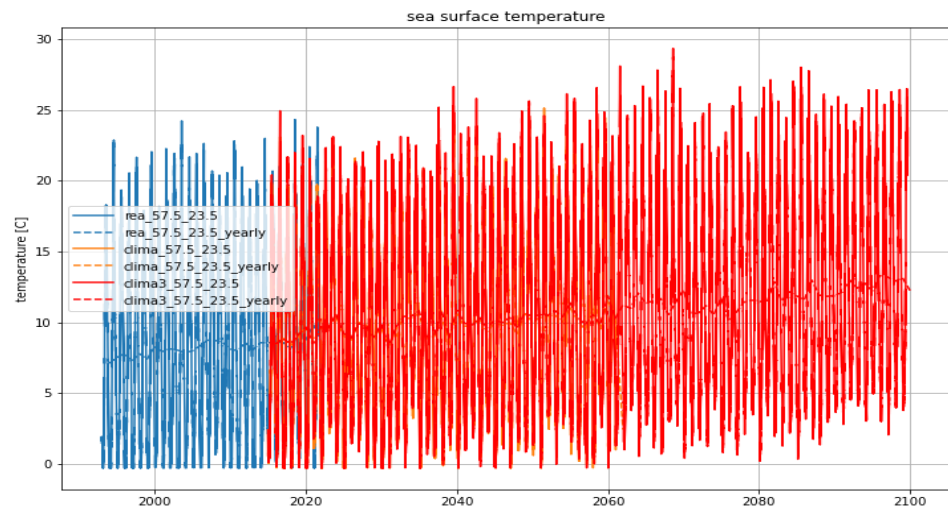

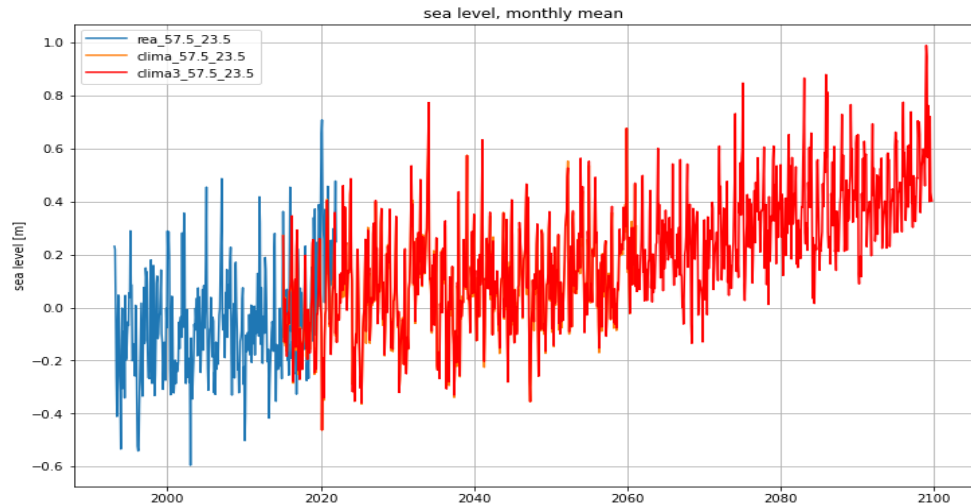

Tides: astronomic calculations

Output: daily in all nodes, hourly in surface nodes

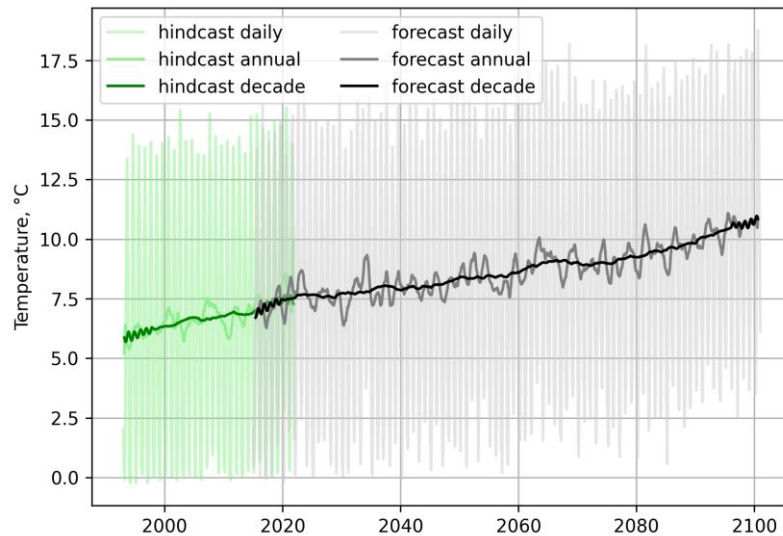

Performance: 1 year/day

Production: 1st iteration Dec-22

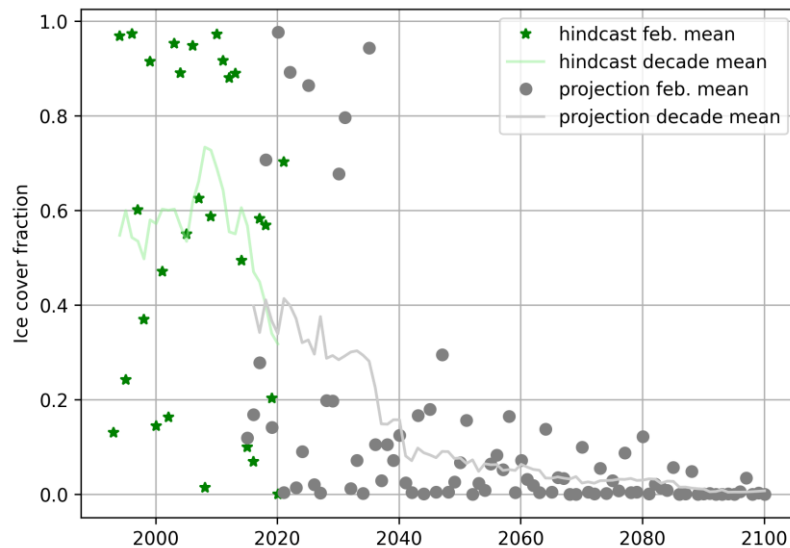

Final iteration Jan/Feb-23

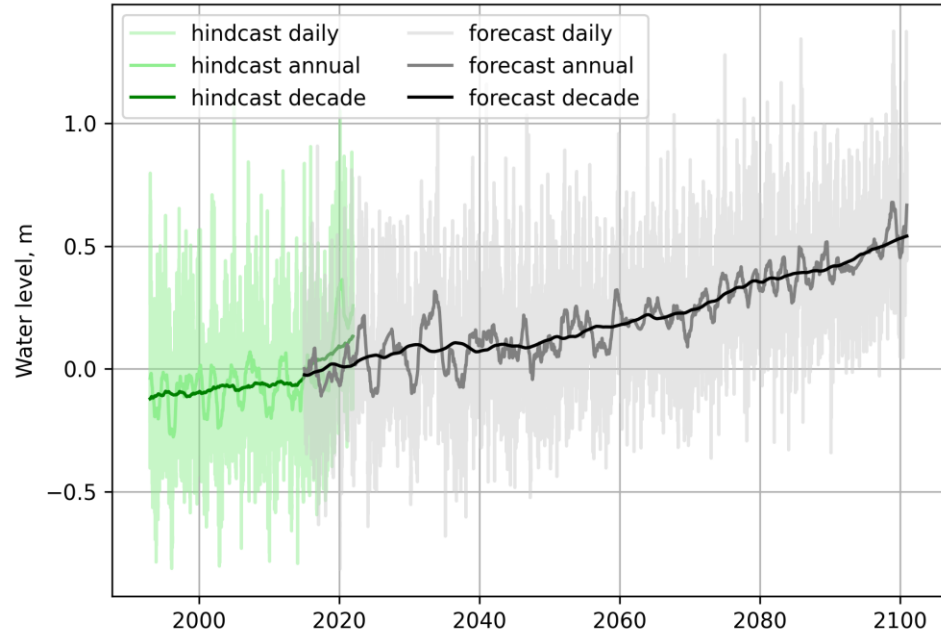

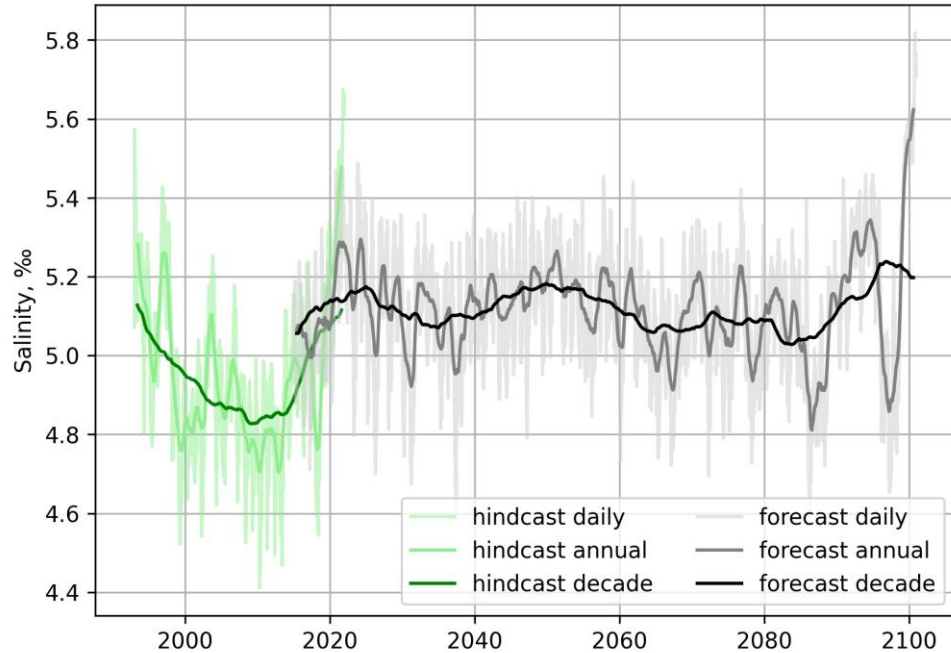

3. Few results - T

3. Few results – FEB ice

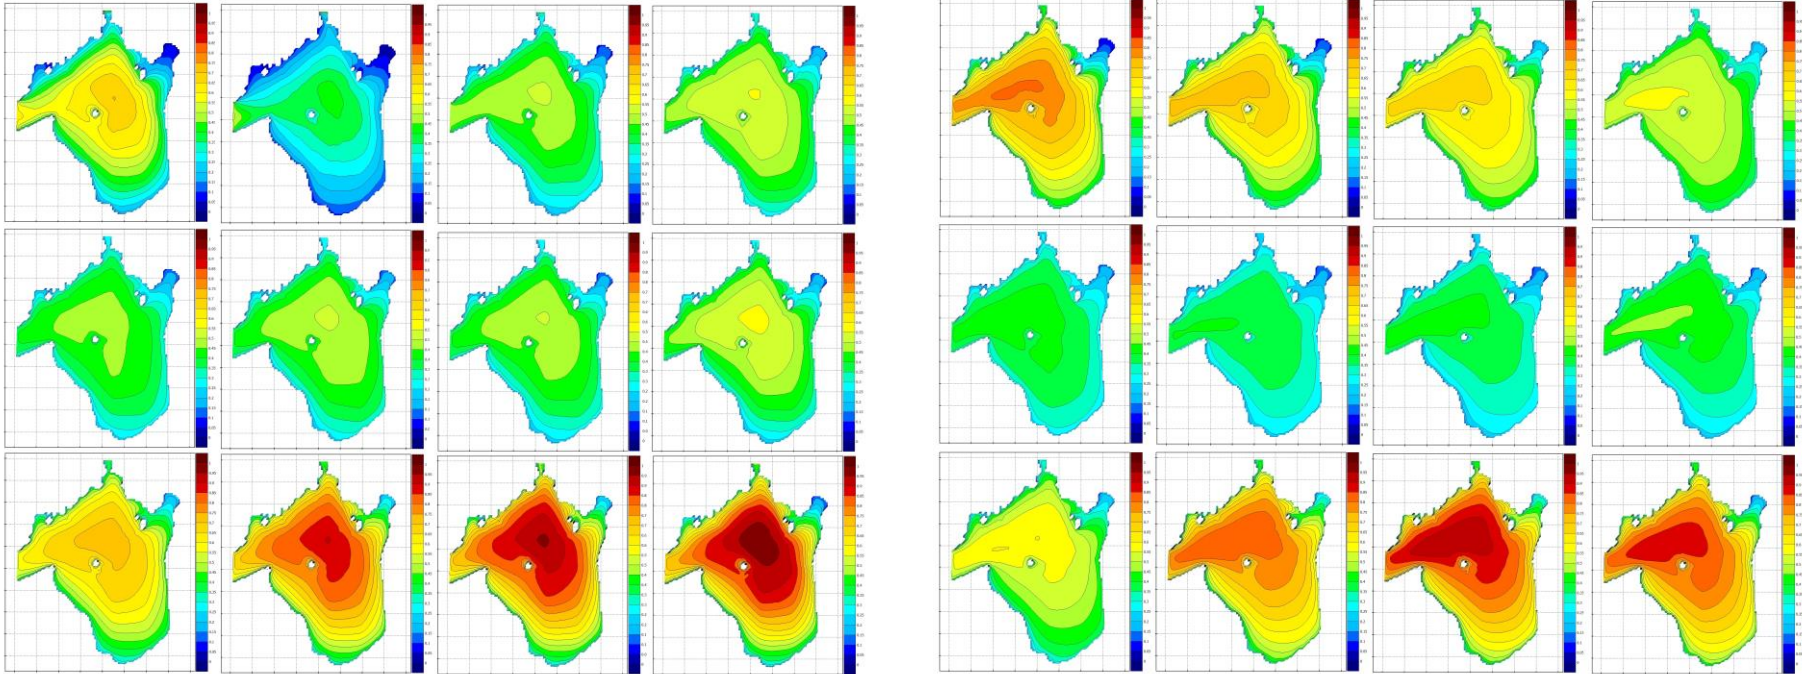

3. Few results – Salinity and Waterlevel

3. Few results – surface velocity and streamlines

3. Few results – waves (monthly, reanalysis/projection)

3. Few results – waves (annual and FEB increase)

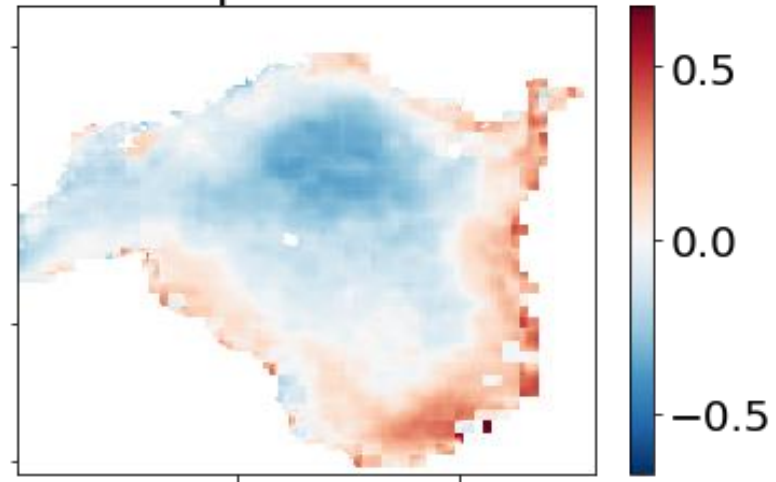

4. KO ar to darīt?

Aprēķini veikti –jāizmanto (bet aprēķinātājiem nav intereses)

- Izvietots ZENODO
- Projekti datu analīzei (attēls – satelītcaurspīdības/sāļuma korelācija)
- WEB lapa = jūras klimata portāls
- Dot 3.pusēm

Visam vajag resursus...

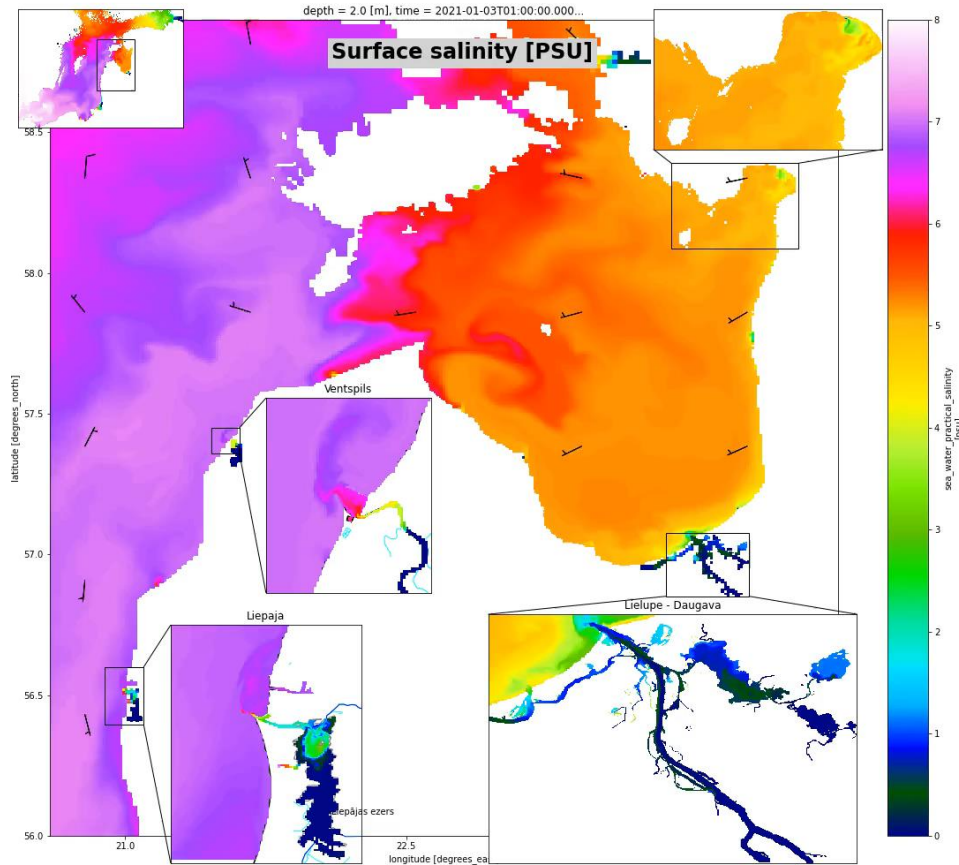

5. Citi jaunumi - HywasPort attīstība

PAIC uzvarēja
MERCATOR konkursā
par CMS lietojumiem.
2023-2025
2 jauni servisi
